

TUTA JEEVITH SWARUP

Phone: 8280669972 — Email: jeevithswaruptuta@gmail.com — [linkedin.com/in/jeevith-swarup](https://www.linkedin.com/in/jeevith-swarup) — github.com/jeevithswarup

Summary

Highly motivated technologist with exceptional problem-solving skills and strong foundation in algorithms and data structures. TCS CodeVita Global Rank 9658 (Top 3-4% among 300,000+) with 200+ competitive programming problems solved. Built 4 production systems solving complex technical problems and delivering business value. Expert in Java and Python with deep knowledge of OOPS principles, backend development, and database architecture. Proficient in SQL, PostgreSQL, and cloud deployment (Render, AWS). Outstanding academic record (8.16 CGPA) with proven success in competitive programming and real-world technical projects. Ready to partner with business leaders to solve complex problems through technology.

Education

Parul University , Vadodara, India	2023 – 2027
B.Tech in Computer Science and Engineering	CGPA: 8.16
Sri Chaitanya Junior College , BIEAP	2023
Class XII (Intermediate)	96.1%
St. Ann's Convent School , ICSE	2021
Class X	73.33%

Technical Skills

Programming Languages: Java (Advanced), Python (Expert), C (Intermediate)

Data Structures & Algorithms: Arrays, Linked Lists, Trees, Graphs, Hash Tables, Dynamic Programming, Sorting, Searching, Algorithm Optimization

Object-Oriented Programming: Inheritance, Polymorphism, Encapsulation, Design Patterns, SOLID Principles

Backend Development: Django, Django REST Framework, REST APIs, System Architecture, Scalable Design

Databases: PostgreSQL, SQL, SQL Query Optimization, Schema Design, Query Performance Tuning

Cloud & Deployment: AWS fundamentals, Render, Google Cloud, Linux, Unix command line

Tools: Git, GitHub, VS Code, Postman

Soft Skills: Problem-Solving, Analytical Thinking, Communication, Teamwork, Mentorship Readiness

Real-World Projects

Scalable Backend System — Production Application (GitHub) — *Java/Python, Django, PostgreSQL, REST APIs, OOPS*

- Built production-grade backend system serving 100+ concurrent users solving real business problems. Designed 20+ RESTful API endpoints with comprehensive error handling and validation demonstrating ability to translate business requirements into technical solutions.
- Implemented OOPS principles: inheritance for user roles, polymorphism for workflow handling, encapsulation for security. Used design patterns (Strategy, Factory) for maintainable code architecture.
- Optimized PostgreSQL queries achieving $O(n \log n)$ complexity using strategic indexing and efficient SQL. Demonstrated ability to solve complex database problems and improve system performance.
- Managed complete technical lifecycle from problem analysis → system design → implementation → testing → deployment. Presented solution to stakeholders and gathered feedback for improvements.

Data Pipeline System — Business Solutions (GitHub) — *Python, Django, PostgreSQL, REST APIs, Data Algorithms*

- Designed end-to-end data pipeline solving real-world business problem with complex data workflows. Implemented sophisticated algorithms for data validation, deduplication, and priority scoring demonstrating algorithm design expertise.
- Built RESTful APIs for multi-stage data processing (ingestion → validation → processing → storage → analytics). Shows ability to build robust systems handling business-critical operations reliably.
- Optimized SQL queries for large-scale data processing. Implemented proper error handling and data consistency checks demonstrating production-grade thinking.

Analytics Engine — Algorithm-Driven Solution (GitHub) — *Python, Django, PostgreSQL, Algorithm Design*

- Engineered data-driven system implementing sophisticated weighted algorithms for complex problem classification. Demonstrates strong algorithmic thinking and ability to translate business logic into code.
- Optimized PostgreSQL queries achieving sub-100ms performance on 1000+ records using advanced SQL techniques and proper indexing strategy. Shows deep understanding of database optimization.

Algorithm & Problem-Solving Excellence

TCS CodeVita Season 13 — Global Rank 9658 among 300,000+ participants (Top 3-4%) demonstrating exceptional problem-solving ability, algorithmic thinking, and ability to solve complex technical problems at global scale

Production Systems — 4 real-world applications solving complex business problems with 100+ active users proving ability to translate theoretical knowledge into practical solutions

Algorithm Design — Implemented sophisticated weighted algorithms, complex data processing logic, and database optimization demonstrating strong algorithmic foundation

Competitive Programming

Solved 200+ algorithmic problems across platforms demonstrating exceptional problem-solving capability, strong command of data structures and algorithms, and commitment to technical excellence.

LeetCode: 160+ problems in Java and Python (Profile) — Strong in Arrays, DP, Trees, Graphs, Sorting, Searching

HackerRank: SQL 3-Star Rating (Advanced level) (Profile) — Advanced database query optimization

Certifications & Achievements

TCS CodeVita Season 13 — Global Rank 9658 among 300,000+ (Top 3-4%) demonstrating elite problem-solving capability

Palo Alto Networks — Cybersecurity Foundation Certificate

NPTEL — Cryptography in Cyber Security (IIT Recognised)
