## Summary

B.Tech Computer Science student (2027 batch) seeking Software Application Development Apprenticeship at Google. Strong problem-solving fundamentals demonstrated through TCS CodeVita Global Rank 9658 among 300,000+ participants and 200+ algorithmic challenges across multiple programming languages. Proficient in Python, Java, C++, and JavaScript with hands-on experience building full-stack applications using Django, REST APIs, and PostgreSQL. Demonstrated analytical and software engineering skills through multiple real-world projects involving system design, algorithm implementation, and scalable application development. Less than one year professional experience with passion for learning software development best practices and contributing to production systems.

## Education
